

Assignment Questions

UNIT III – PHP Practical Tasks

1. Customer Visit Tracking Using Cookies

Task:

Develop a PHP application that:

- Uses cookies to store customer preferences.
- Tracks customer visits to the website.
- Displays personalized greetings during subsequent visits.

2. Article File Reading and Display

Task:

Develop a PHP application that:

- Read article details from a text file.
- Counts the number of lines in the file.
- Displays the article content in a formatted manner.

3. Patient File Management System

Task:

Develop a PHP-based file management system

- that:
- Stores patient information.
 - Retrieves patient records based on patient ID.
 - Maintains separate files for different departments.

4. Assignment Submission and File Validation

Task:

Develop a PHP application that:

- Allows students to upload assignments.
- Validates the uploaded file types.
- Stores uploaded files in department-wise directories.

5. Employee Attendance File Management

Task:

Create a PHP application that:

- Stores employee attendance details in a text file.
- Retrieves the stored employee records.
- Displays the retrieved attendance information.

6. User Last Login Tracking Using Cookies

Task:

Develop a PHP application that:

- Uses cookies to store user login information.
- Uses date and time functions to record the last login time.
- Displays the user's last login time.

7. Online Shopping User Management

Task:

Design a PHP application that:

- Uses cookies and sessions for user management.
- Maintains user login status.
- Maintains shopping cart information.
- Maintains browsing history.

8. Student Activity Report System

Task:

Develop a PHP application that:

- Uses file operations to maintain student activity information.
- Uses date functions to process activity records.
- Uses session variables to track student activities.
- Generates activity summaries for each learner.

9. Student Records File Update System

Task:

Develop a PHP application that:

- Maintains student details in a file.

- Appends new student records to an existing file.
- Displays the updated contents of the file.

10. Daily Project Log Generator

Task:

Develop a PHP application that:

- Creates daily project log files automatically.
- Uses date and time functions.
- Stores project log information in the generated files.

11. Shipment Records File Management System

Task:

Create a PHP application that:

- Maintains shipment records in multiple files.
- Uses file handling functions.
- Uses directory functions.
- Organizes shipment information.
- Retrieves shipment records efficiently.

12. Secure Session Management System

Task:

Develop a secure login management solution that:

- Implements session-based authentication.

- Implements cookie-based authentication.
- Differentiates the use of sessions and cookies.
- Provides secure user login management.

13. Hotel Stay Duration Calculator

Task:

Develop a PHP application that:

- Accepts guest check-in date.
- Accepts guest check-out date.

- Calculates the total number of days stayed.
- Displays the duration of stay.

14. Date and Time Report Generator

Task:

Develop a PHP application that:

- Displays the current date and time.
- Uses multiple date and time formats.
- Generates customized date and time reports.

15. Event Registration and Scheduling System

Task:

Develop a PHP application that:

- Uses date functions for event scheduling.
- Uses file handling to maintain event information.
- Uses session tracking for event registrations.
- Manages event schedules.

16. Travel Booking Management System

Task:

Develop a PHP application that:

- Manages travel dates.
- Maintains customer information using files and sessions.
- Manages booking schedules across different destinations.
- Generates booking confirmations.

17. Department Document Directory

Management Task:

Develop a PHP application that:

- Uses directory functions.
- Creates folders based on user requirements.
- Renames folders.

- Deletes folders based on user requirements.

18. Student Records Backup System

Task:

Develop a PHP application that:

- Creates backup files automatically.
- Maintains digital student records.
- Records backup information.
- Stores timestamps for backup operations.

19. Multimedia File Management System

Task:

Develop a PHP-based file management system

- that:
- Categorizes multimedia files.
 - Searches for images and videos.
 - Retrieves multimedia files efficiently.
 - Manages large numbers of multimedia files.

20. Cloud Document Directory

Management Task:

Develop a PHP directory management application

- that:
- Handles uploaded documents.
 - Stores files in appropriate directories.
 - Retrieves stored documents.
 - Handles file deletion requests.

21. Resume Upload Validation System

Task:

Develop a PHP application that:

- Allows job applicants to upload resumes.
- Validates uploaded files.
- Identifies invalid file submissions.
- Displays suitable error messages for invalid files.

22. Report File Access System

Task:

Develop a PHP application that:

- Stores reports in different folders.
- Uses PHP directory functions.
- Displays available files.
- Allows users to access selected reports.

23. Secure Document Management System

Task:

Develop a PHP application that:

- Implements secure file handling.
- Prevents duplicate file uploads.
- Prevents unauthorized file access.
- Provides secure document management.

24. User Activity and File Access Log System

Task:

Develop a PHP solution that:

- Maintains user login history.
- Maintains file access logs.
- Uses file handling.
- Uses sessions and cookies.
- Generates user activity reports.

25. Login Redirection Using HTTP Headers

Task:

Create a PHP application that:

- Authenticates users after successful login.
- Uses HTTP headers for redirection.
- Redirects authenticated users to their dashboard page.

26. Visitor Session Tracking System

Task:

Create a PHP application that:

- Maintains user sessions.
- Tracks pages visited by users.
- Counts the number of pages visited during a browsing session.
- Displays the session-based page visit count.

27. Secure Examination Access Control System

Task:

Develop a PHP application that:

- Uses sessions for authentication.
- Uses cookies for user management.
- Uses HTTP headers for access control.
- Manages secure access to the examination system.
- Prevents unauthorized access.

28. Secure Medical Record Management System

Task:

Implement a PHP solution that:

- Manages sensitive medical reports.
- Uses secure session management.
- Implements secure file handling.
- Prevents unauthorized access to medical records. ●

Applies appropriate session and file security measures.
